

CWT Mini

CWT MiniHF NEW

- New model featuring

- **A novel electrostatic shielded Rogowski coil** providing excellent immunity to interference from fast local dV/dt transients or large 50/60Hz voltages
- **Extended (-3dB) high frequency bandwidth** 30MHz for a 100mm coil
- **Peak di/dt** capability up to 100kA/ μ s
- **Wide operating temperature** from -40°C to +125°C
- **4.5mm thick Rogowski coil with 5kV peak insulation.**

Rogowski benefits

Both versions offer the advantages of a CWT Rogowski probe, including:

- simple to use and easy to insert into difficult to reach parts of the circuit
- practically zero insertion impedance
- freedom from flying leads
- isolated measurement
- peak-current ratings from 30A to 300kA
- ± 6 V into 1M Ω , and now with 50 Ω drive capability

5kV CWT MiniHF coil through the legs of a TO-247 device

CWT Mini

- Improvements to the existing range

- **Extended (-3dB) low frequency bandwidth** typically less than 1Hz
- **Extended (-3dB) high frequency bandwidth** up to 20MHz for a 100mm coil
- **Improved peak di/dt** up to 40kA/ μ s
- **3.5mm thickness with 2kV_{peak}, and 4.5mm thickness with 5kV_{peak} insulation coils**

Applications

- Semiconductor switching waveforms (device loss)
- Measuring high frequency sinusoidal, pulsed or transient currents from power frequency to rf applications
- Power converter development and diagnostics for example:
 - MOSFET/IGBT devices as small as TO-247 or around the terminals of large power modules
 - monitoring currents in small inductors, capacitors, snubber circuits, etc
- Measuring small AC currents in the presence of large DC currents (e.g. monitoring capacitor ripple)
- Measuring current in motor drives and in particular power quality measurements in VSD, UPS or SMPS circuits
