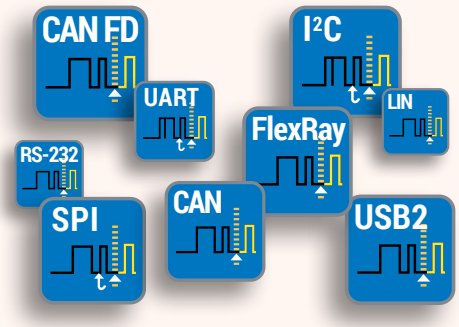
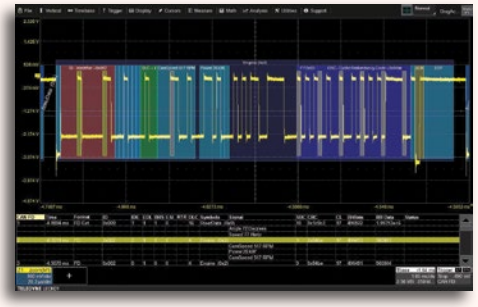
- High Speed Computing
- Data Storage
- Serial Digital Audio





Trigger

Designed by people who know the standards, with the unique capabilities you want to isolate unusual events. Conditional data triggering permits maximum flexibility, and highly adaptable error frame triggering is available to isolate error conditions. Frame definition groups UART or SPI packets into message frames for customization. Sequence Mode ignores idle time and acquires only data of interest.

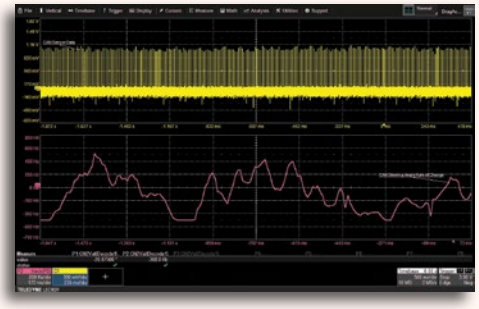
Decode

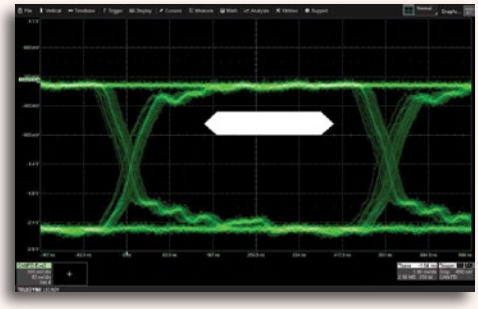
Decoded protocol information is color-coded to specific portions of the serial data waveform and transparently overlaid for an intuitive, easy-to-understand visual record. All decoded protocols are displayed in a single time-interleaved table. Touch a row in the interactive table to quickly zoom to a packet of interest and easily search through long records for specific protocol events using the built-in search feature.

ProtoSync

ProtoSync combines the oscilloscope view with a simultaneous view of data link layer decodes on the same instrument. This combination makes ProtoSync very effective in debugging protocol-specific negotiation rates.

Compatible with PCI Express, USB 2.0, USB2-HSIC, SAS, SATA, and Fibre Channel.





Measure/Graph

Quickly validate cause and effect with automated timing measurements to or from an analog signal or another serial message. Make multiple measurements in a single long acquisition to quickly acquire statistics during corner-case testing. Serial (digital) data can be extracted to an analog value and graphed to monitor system performance over time, as if it was probed directly. Complete validation faster and gain better insight.

Eye Diagram

Rapidly display an eye diagram of your packetized low-speed serial data signal without additional setup time. Use eye parameters to quantify system performance and apply a standard or custom mask to identify anomalies. Mask failures can be indicated and can force the scope into Stop mode.

SDAIII or DDR Debug (optional) create eye diagrams of streaming NRZ serial data or DDR signals, and measure and analyze jitter breakdown.

QualiPHY / Compliance

Compliance testing is a critical part of the design cycle in order to ensure that requirements are met. The QualiPHY framework provides an automated and easy-to-use compliance testing platform for a number of serial data standards.

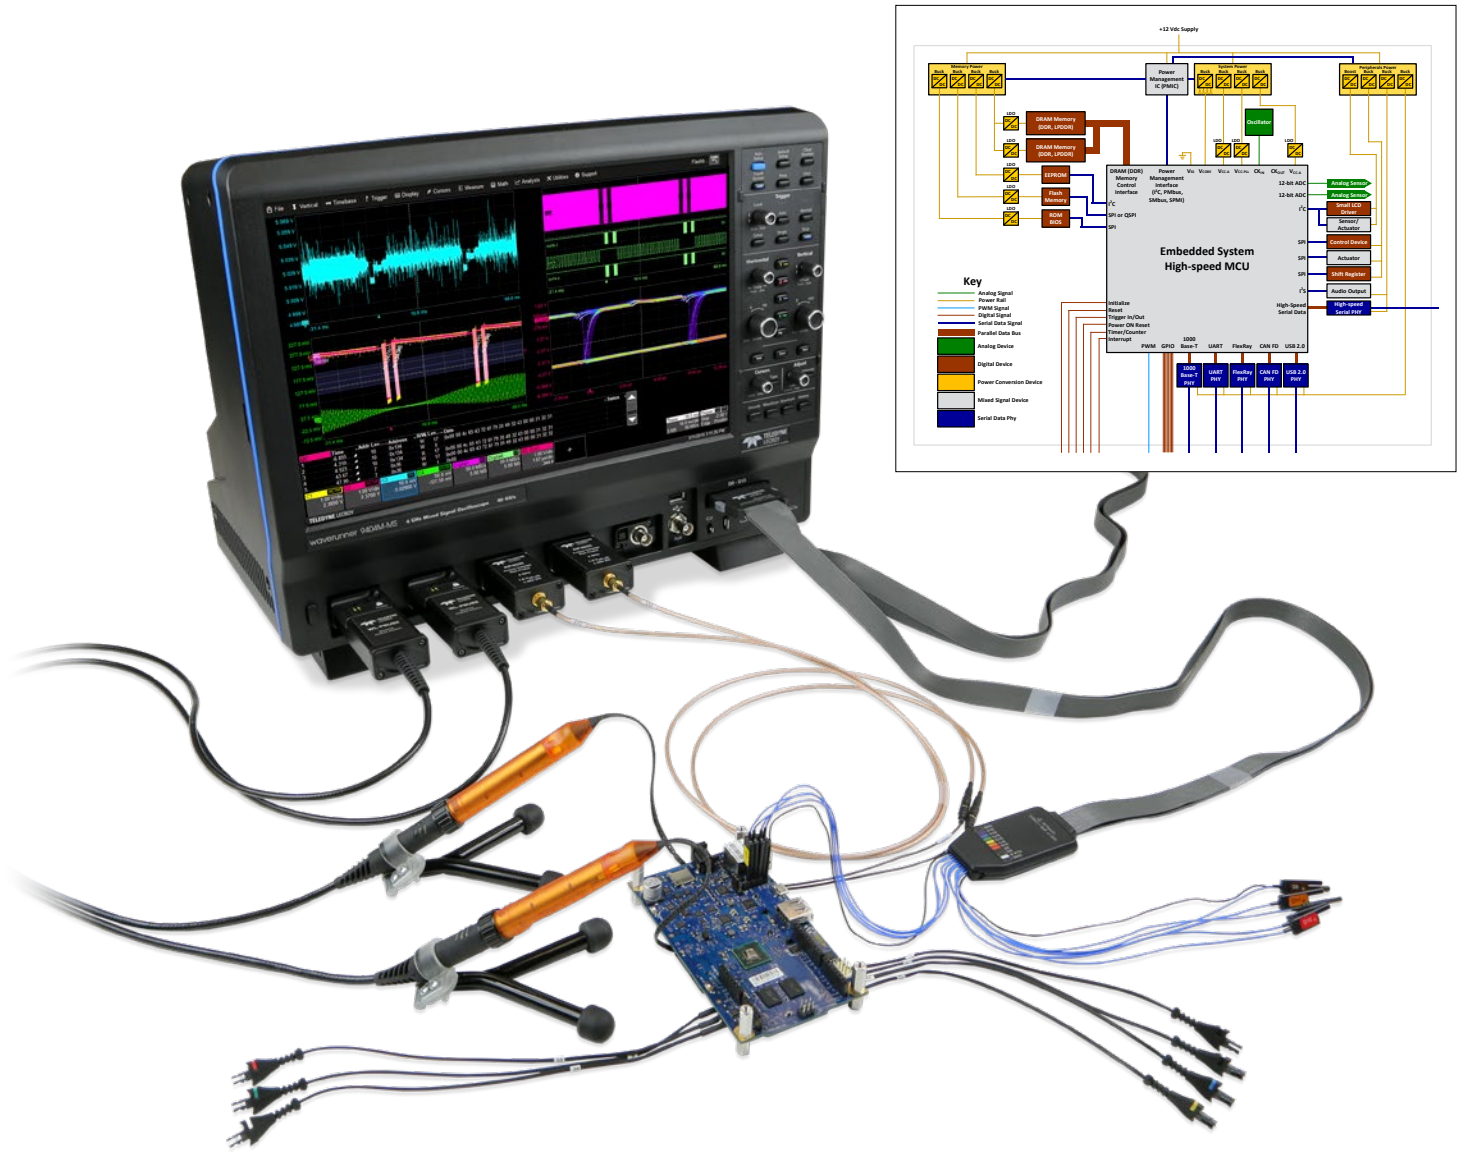
EMBEDDED COMPUTING SYSTEMS TESTING



WaveRunner 9000 oscilloscopes have unsurpassed test, debug and validation tools to enable the most comprehensive embedded computing system (analog, digital and serial data) testing.

Powerful, deep toolbox

More standard math, measure, pass/fail and other toolsets provide faster and more complete insight into circuit problems. Many additional application packages are optionally available to enhance understanding.

Superior serial data toolsets

Comprehensive low-speed serial data triggers and decoders, plus measure/graph and eye diagram testing, provide the best causal analysis. Powerful serial data jitter analysis toolsets and compliance packages simplify complex validation.

Comprehensive probe offering

A wide selection of low voltage, high voltage and current probes accurately measures every signal in your circuit. In addition, probe adapters provide a simple and easy interface of third-party probes.

AUTOMOTIVE TESTING

WaveRunner 9000 oscilloscopes provide a wide-range of validation and debug software which has been tailored to the specific test needs of the automotive industry.

Vehicle bus debug tools

Unique capabilities that build on triggering and decoding provide the most complete serial data debug and validation of automotive buses such as CAN, CAN FD, LIN, FlexRay, SENT, MOST, and more.

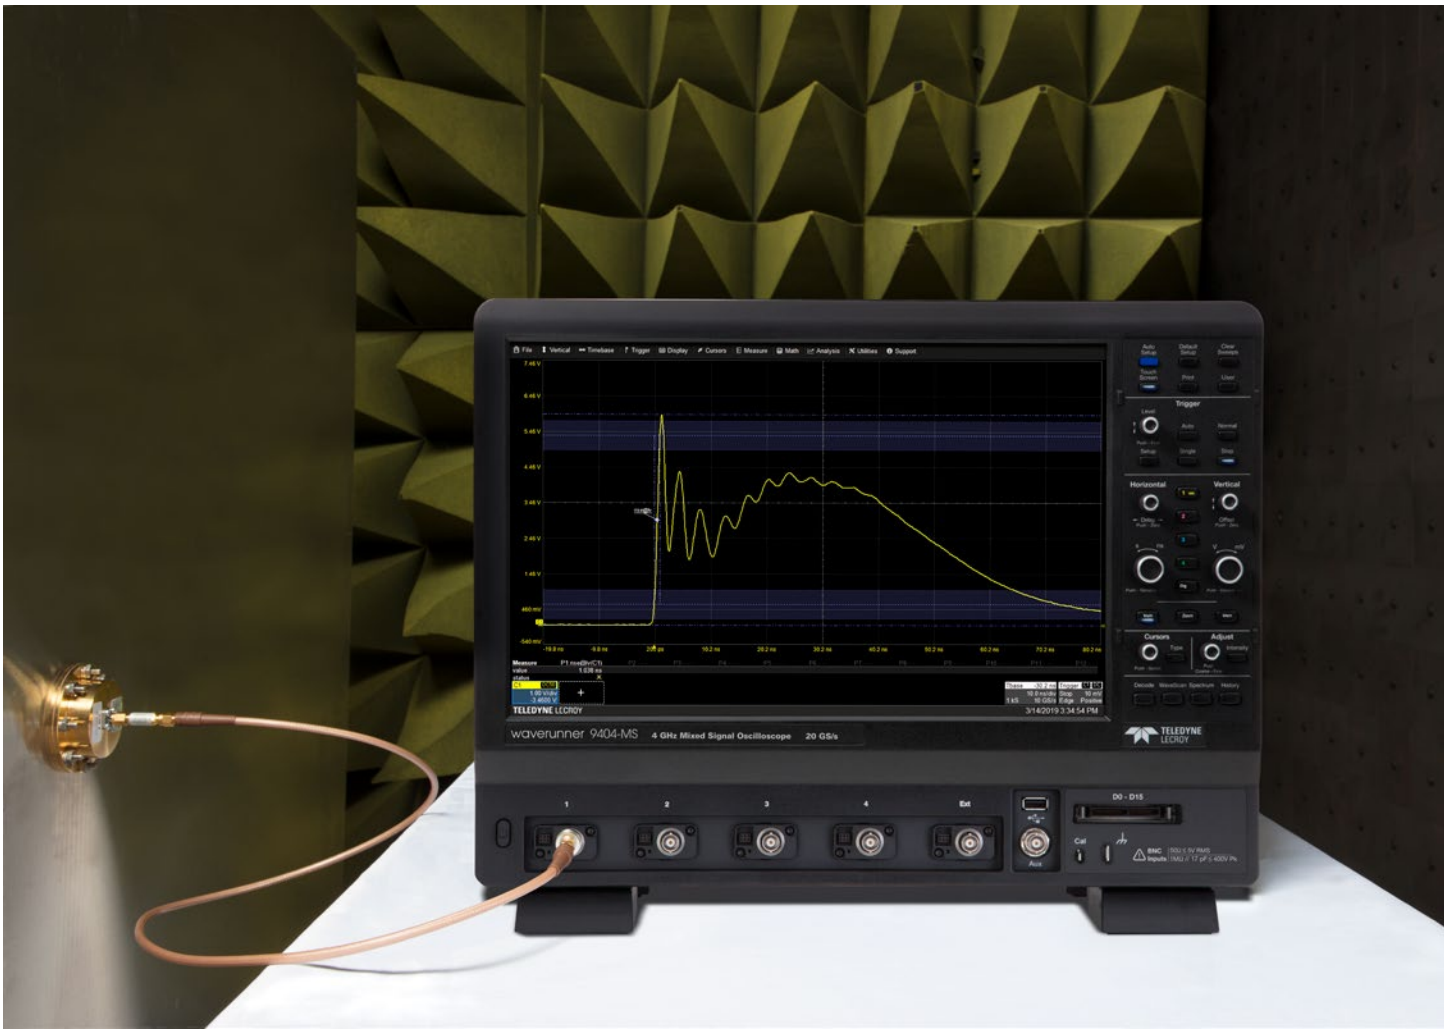
Ethernet beyond compliance

Cover all aspects of physical layer testing needs with compliance testing for 100Base-T1 and 1000Base-T1, and go beyond compliance with the unique and dedicated Automotive Ethernet debug toolkit.

Precise EMI/EMC analysis

4 GHz bandwidth and 40 GS/s sample rate along with dedicated, fully integrated Spectrum Analyzer and EMI/EMC packages enable root causes to be found quickly and easily.

ELECTROMAGNETIC COMPATIBILITY (EMC/EMI)



WaveRunner 9000 oscilloscopes accurately characterize EMC test signals with 40 GS/s, 1% gain accuracy, and a dedicated EMC pulse parameter package.

Pulse measurement fidelity

Fast pulse rise times require 2.5 to 4 GHz bandwidth at very high sample rates to ensure measurement confidence. WaveRunner 9000 provides the most accurate characterization using 40 GS/s sample rate and 1% gain accuracy.

Simplified frequency analysis

Spectrum Analyzer mode simplifies setup for analyzing EMI effects precisely. Identify instantaneous peak, quasi-peak, and maximum hold peaks across a wide EMI band using an interactive peaks and markers table. View the repetitive nature of harmonics with Spectrogram.

EMC pulse parameter package

Customizable measurements provide values per specific EMC/ESD standards. Level selections can be made to ignore undershoot, overshoot, or tail perturbations. Measurement filtering can limit measurement sets or ignore unwanted perturbations.

Enhanced Resolution using Filtering

WaveRunner 9000 oscilloscopes have standard capability to provide improved resolution (with bandwidth tradeoffs) by filtering. Each channel can be filtered independently. The filter result shows the number of effective bits improvement at a given bandwidth. Filtering is a good approach to higher resolution provided the tradeoffs between resolution and bandwidth are acceptable.

For more details, reference the section on filtering in the white paper:

Measurement Trigger	Select from a large number of measurement parameters trigger on a measurement value with qualified limits.			
Multi-stage: Qualified	Triggers on any input source only if a defined state or edge occurred on another input source. Delay between sources is selectable by time or events.			
Multi-stage: Qualified First	In Sequence acquisition mode, triggers repeatably on event B only if a defined pattern, state, or edge (event A) is satisfied in the first segment of the acquisition. Holdoff between sources is selectable by time or events.			
Low Speed Serial Protocol Triggering (Optional)				
	I2C, SPI (SPI, SSPI, SIOP), UART-RS232, CAN1.1, CAN2.0, CAN FD, LIN, FlexRay, MIL-STD-1553			
Measurement Tools				
Measurement Functionality	Display up to 8 measurement parameters together with statistics including mean, minimum, maximum, standard deviation, and total number. Each occurrence of each parameter is measured and added to the statistics table. Histicons provide a fast, dynamic view of parameters and waveshape characteristics. Parameter math allows addition, subtraction, multiplication, or division of two different parameters. Parameter gates define the location for measurement on the source waveform. Parameter accept criteria define allowable values based on range setting or waveform state.			
Measurement Parameters - Horizontal + Jitter	Cycles (number of), Delay (from trigger, 50%), Δ Delay (50%), Duty Cycle (50%, @level), Edges (number of, @level), Fall Time (90-10, @levels), Frequency (50%, @level), Half Period (@level), Hold Time (@level), N Cycle Jitter (peak-peak), Number of Points, Period (50%, @level), Δ Period (@level), Phase (@level), Rise Time (10-90, @levels), Setup (@levels), Skew (@levels), Slew Rate (@levels), Time Interval Error (@level), Time (@level), Δ Time (@level), Width (50%, @level), Δ Width (@level), X(value)@max, X(value)@min			
Measurement Parameters - Vertical	Amplitude, Base, Level@X, Maximum, Mean, Median, Minimum, Peak-to-Peak, RMS, Std. Deviation, Top			
Measurement Parameters - Pulse	Area, Base, Fall Time (90-10, 80-20, @levels), Overshoot (positive, negative), Rise Time (10-90, 80-20, @levels), Top, Width (50%)			
Measurement Parameters - Statistical (on Histograms)	Full Width (@ Half Max, @%), Amplitude, Base, Peak@MaxPopulation, Maximum, Mean, Median, Minimum, Mode, Range, RMS, Std. Deviation, Top, X(value)@Peak, Peaks (number of), Percentile, Population (@bin, total)			
Math Tools				
Math Functionality	Display up to 8 math function traces (F1–F8). The easy-to-use graphical interface simplifies setup of up to two operations on each function trace, and function traces can be chained together to perform math-on-math.			
Math Operators - Basic Math	Average (summed), Average (continuous), Difference (–), Envelope, Floor, Invert (negate), Product (x), Ratio (/), Roof, Sum (+)			
Math Operators - Digital (incl. with MSO models/options)	Digital AND, Digital DFlipFlop, Digital NAND, Digital NOR, Digital NOT, Digital OR, Digital XOR			
Math Operators - Filters	Enhanced resolution (to 11 bits vertical), Interpolate (linear, cubic, sinx/x)			
Math Operators - Frequency Analysis	FFT (power spectrum, magnitude, phase, power density, real, imaginary, magnitude squared) up to full analysis memory length. Select from Rectangular, VonHann, Hamming, FlatTop and Blackman Harris windows.			
Math Operators - Functions	Absolute value, Correlation (two waveforms), Derivative, Deskew (resample), Exp (base e), Exp (base 10), Integral, Invert (negate), Log (base e), Log (base 10), Reciprocal, Rescale (with units), Square, Square root, Zoom (identity)			
Math Operators - Other	Segment, Sparse			
Measurement and Math Integration				
	Histograms to display statistical distributions of up to 2 billion measurement parameters. Trend (datalog) of up to 1 million measurement parameters. Track (display parameter vs. time, time-correlated to acquisitions) any parameter. Persistence histogram and persistence trace (mean, range, sigma)			
Pass/Fail Testing				
	Simultaneously test multiple parameters against selectable parameter limits or pre-defined masks. Pass or fail conditions can initiate actions including document to local or networked files, e-mail the image of the failure, save waveforms, send a pulse out at the front panel auxiliary BNC output, or (with the GPIB option) send a GPIB SRQ.
