

# Advanced User Software Options Bundle

## Included Software Options

- XDEV
- DFP2
- SPECTRUM-PRO-2R
- ZONETRIGGER
- EMC

## Key Customer Benefits

- XDEV – Customization & Automation Power
  - › Enables users to create custom math functions, processing routines, and automated workflows.
  - › Integrates external code (C/C++, MATLAB®, Python) for advanced analysis tailored to unique applications.
  - › Boosts productivity by automating repetitive tasks and extending oscilloscope capability beyond built-in tools.

- DFP2 – Deep, High-Resolution Frequency Analysis
  - › Provides advanced digital filtering and precision frequency-domain tools.
  - › Enhances signal clarity, enabling users to isolate, measure, and understand complex behaviors.
  - › Ideal for noise reduction, harmonic analysis, and detailed spectral investigations.
- SPECTRUM-PRO-2R – Professional-Grade Spectrum Analysis
  - › Delivers high-performance FFT, spectrograms, and real-time frequency-domain visualization.
  - › Perfect for RF, EMI, vibration, and power-electronics diagnostics.
  - › Helps engineers quickly identify anomalies, trends, and intermittent events.
- ZONETRIGGER – Intelligent, Visual Triggering
  - › Allows users to draw zones directly on the screen to trigger on events of interest.
  - › Dramatically reduces setup time for complex triggers.
  - › Captures elusive or rare signal behaviors with unmatched precision.
- EMC – Electromagnetic Compatibility Debug Tools
  - › Provides specialized analysis for pre-compliance and EMI troubleshooting.
  - › Helps identify emissions issues early in the design cycle, reducing costly redesigns.
  - › Supports faster, more confident development of EMC-ready products.
